# SVM

#### Resumen de los resultados SVM

En esta sección, sólo se considera la precisión de cada SVM y el tiempo durador en ser entrenada. Los detalles completos de los valores usados para cada entrenamiento de pueden encontrar en los Resultados completos SVM.

En la primera prueba, se compara el kernel polinomial contra los demás tipos de kernels que Scikit tiene a disposición.

Table 1: Comparación de distintos tipos de kernels para SVM

| Kernel      | Accuracy      | Elapsed Time |
|-------------|---------------|--------------|
| Polynomial* | 0.9760606061* | 0:03:03*     |
| Lineal      | 0.9231601732  | 0:04:49      |
| RBF         | 0.9813419913  | 0:14:27      |
| Sigmoid     | 0.347012987   | 0:18:54      |

Se puede observar que el polinomial presenta los mejores resultados, junto con el menor tiempo de entrenamiento. El lineal dura casi 2min más y posee un rendimiento de aproximadamente 5% peor; el RBF mejora la precisión a costa de aumentar el triple el tiempo de entrenamiento. El sigmoide es el de peor resultados.

Se utiliza el kernel polinomial para ver la variación de los demás parámetros debido al desempeño obtenido. También se utiliza esta corrida como control, denotado por un (\*).

Table 2: Comparación de distintos grados polinomiales

| Degree (Poly) | Accuracy      | Elapsed Time |  |  |
|---------------|---------------|--------------|--|--|
| 3*            | 0.9760606061* | 0:03:03*     |  |  |

| Degree (Poly) | Accuracy     | Elapsed Time |
|---------------|--------------|--------------|
| 1             | 0.9383549784 | 0:03:25      |
| 5             | 0.9624242424 | 0:03:53      |
| 10            | 0.8970562771 | 0.07.51      |
| 25            | 0.7251948052 | 0:17:46      |
|               |              |              |

La función parece tener una forma cuadrática, pues para valores >5 se obtienen resultados notablemente peores; además, para valores <3 se tiene una tendencia decreciente.

Table 3: Comparación de distintos costes de penalización

| Penalty (Poly) | Accuracy      | Elapsed Time |
|----------------|---------------|--------------|
| <u>5</u> *     | 0.9760606061* | 0:03:03*     |
| 0.001          | 0.9346320346  | 0:13:11      |
| 50             | 0.9760606061  | 0:03:09      |
| 500            | 0.9760606061  | 0:03:19      |
| 5000           | 0.9760606061  | 0:03:38      |

El comportamiento con respecto a la variación de costo es creciente hasta que se llega a un techo en el cual no se logra obtener una mejora.

Table 4: Comparación de distintos coeficientes de kernel

| Gamma (Poly) | Accuracy      | Elapsed Time |
|--------------|---------------|--------------|
| 0.01*        | 0.9760606061* | 0:03:03*     |
| 0.005        | 0.9612987013  | 0.07.47      |
| 0.1          | 0.9760606061  | 0:03:05      |
| 1            | 0.9760606061  | 0:03:07      |
| 10           | 0.9760606061  | 0:03:02      |

Ocurre una conducta similar entre el cambio de gamma por valores mayores y la penalización. Para valores más cercanos a 0 sucede un detrimento de la precisión; para valores mayores al de control, se choca contra un techo de desempeño.

Con respecto al tiempo, existe una mejora casi despresiable cuando se alcanza el techo.

## Red Neuronal

#### Resumen de los resultados de la red

En esta sección solo se consideran los valores de pérdida y precisión de los modelos probados de configuración de la red neuronal. Los detalles completos de las configuraciones y todas las métricas para cada entrenamiento de pueden encontrar en los Resultados completos Red.

Table 5: Comparación de precisión y pérdida de los mejores modelos encontrados

| Model Number | Accuracy     | Loss         |
|--------------|--------------|--------------|
| 15           | 0.9708217072 | 0.0938597477 |
| 11           | 0.9717056454 | 0.1071203510 |
| 13           | 0.9694682312 | 0.1133420477 |

#### Modelo 15:

Primera capa: 60 neuronas, activación: ReLu
Segunda capa: 60 neuronas, activación: Sigmoide

• Epocas: 10

Loss: 0.0938597477Accuracy: 0.9706

## Modelo 11:

Primera capa: 60 neuronas, activación: ReLu
Segunda capa: 60 neuronas, activación: ReLue

• Epocas: 10

Loss: 0.1071203510Accuracy: 0.9717

#### Modelo 13:

Primera capa: 65 neuronas, activación: ReLu
Segunda capa: 65 neuronas, activación: ReLue

• Epocas: 10

Loss: 0.1133420477Accuracy: 0.9698

## Comparación contra SVM

Las mejores configuraciones encontradas para SVM y Red neuronal están dadas por:

• SVM

- Kernel: Polynomial

Degree: 3Penalty: 5Gamma: 0.01

- Precisión resultante: 0.9760606061

• Red neuronal

Primera capa: 60 neuronas, activación: ReLu
Segunda capa: 60 neuronas, activación: Sigmoide

- Precisión resultante: 0.9708217072

Se puede observar que hay una diferencia de precisiones menor al 1%.

#### Resultados completos de la red

En esta sección se detalla la configuración de cada uno de los entrenamientos realizados, así como las métricas de Precisión y pérdida. Además se adjunta a cada entrenamiento la matriz de confusión resultante.

#### Model 1:
